# OUT OF THE BOX ...

## ... ready to build!

### New manufacturing concept for modular gripper systems from TÜNKERS

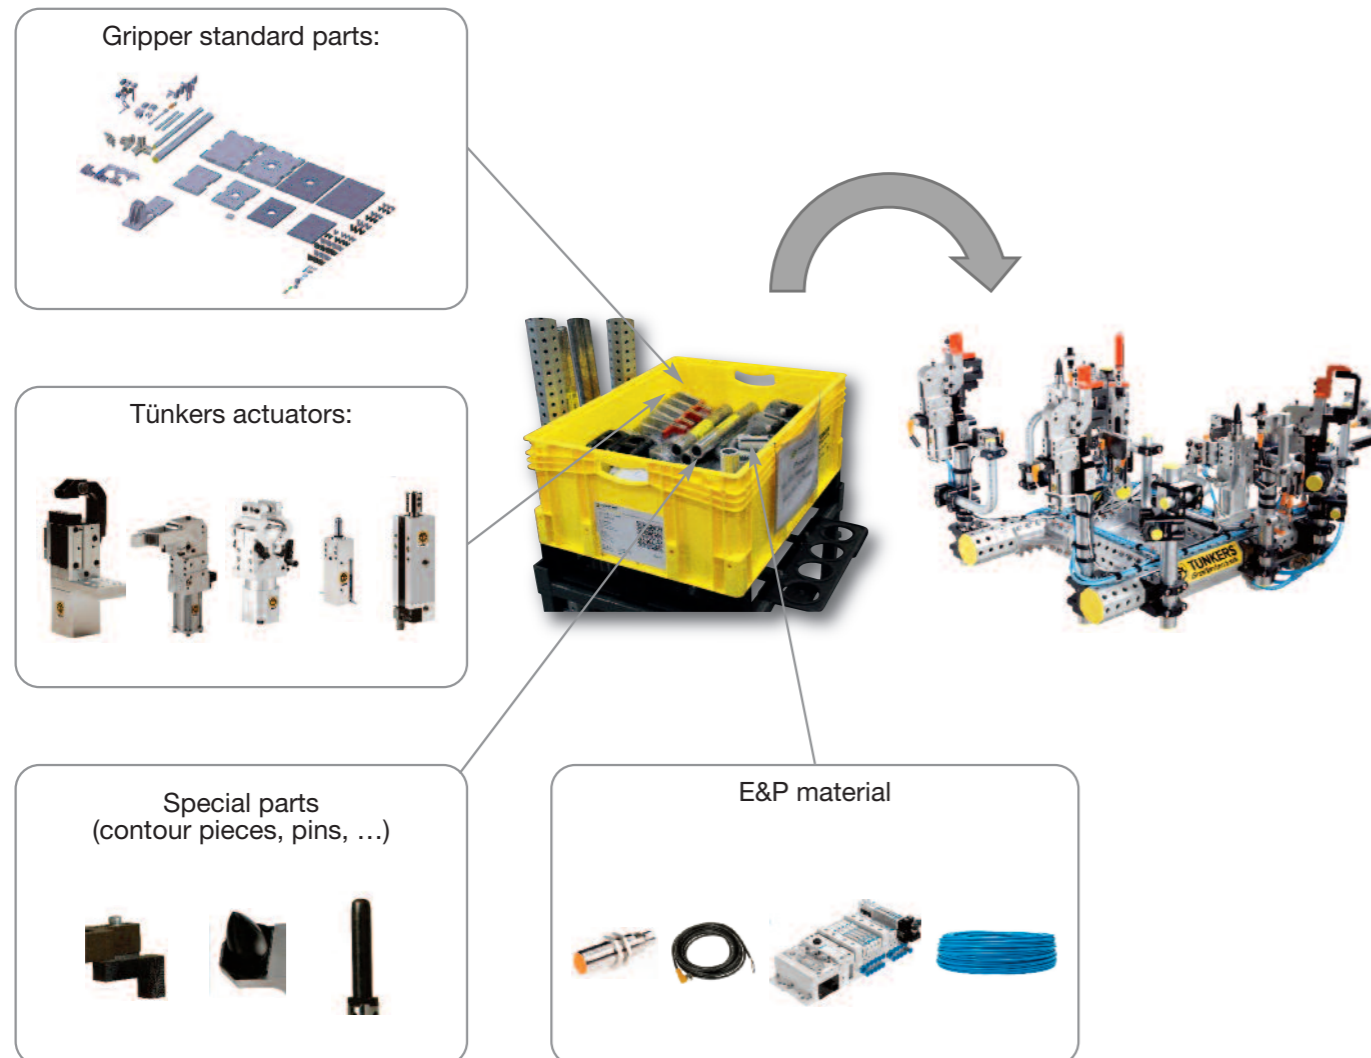

**TÜNKERS**  
Ingenuity in series.

## What does “OUT OF THE BOX” mean?

Out of the Box – this is the name of our new manufacturing concept for modular gripper systems.

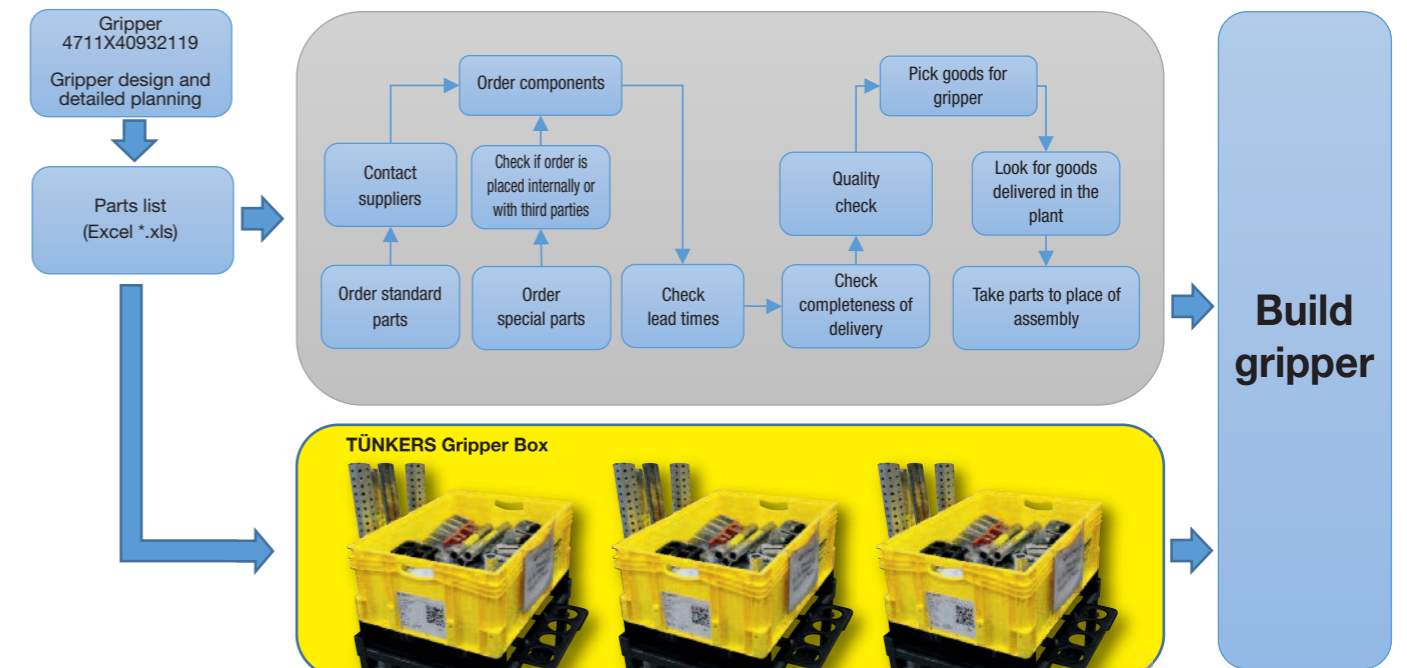

In a nutshell: You send us the parts list in standard format (preferably .xls) and we deliver one box per gripper which contains all parts that are necessary to build the modular gripper! Including system components, special parts, clamping technology, contour pieces\*, but also electric\* and pneumatic\* components or the printed labels\*. These parts will be picked by us and put into a yellow gripper box – which is, of course, a series-manufactured, reusable container.

## Your complete gripper in next to no time!

This means that assembly times and job preparation for “last minute” process and design changes as well as corrections on site are a thing of the past, saving time for planning and provision of individual parts and reducing costs. The “Gripper out of the Box” is more compact and better protected, it can be shipped easily worldwide and it is available for assembly immediately before the start of commissioning. In case of any modifications or adjustments of the modular system on site, there are no further project management, job preparation and assembly times required. It goes without saying that we will also take care of assembly and integration of the modular systems on site.

**Contact us!**

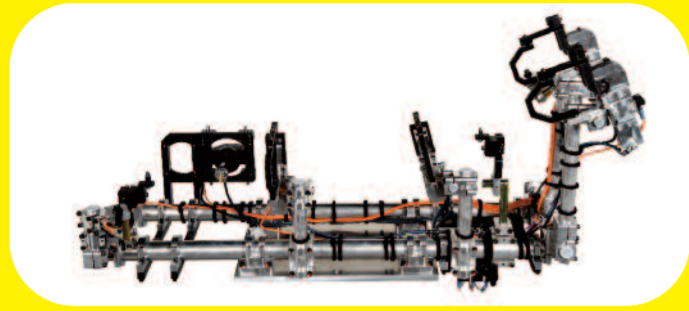

\* additional order documents like manufacturing drawing, label list, E- or P-parts list required
